

Custers Handy scaffold - Safe Guard

CUSTERS

Aluminium Scaffolding

Service & Maintenance

Ground Support Equipment

Proven top quality from Custers!

This mobile scaffold has been developed for the most demanding industrial applications and the rental industry.

The perfectly stackable Handy platforms with double sided wind securing pins are particularly user-friendly. The rip-grip profile on the all around welded rungs ensure an optimal grip for safe climbing and handling during erection.

The solid end rings protect the frames against deformation. Besides this the castor wheels with spindle have a clever locking system that makes assembly and disassembly extremely user-friendly.

The Safe Guard guardrail frames offer a state of the art solution for quick and safe assembly up to the requested working height. The trusted Custers stability feeling can be assured by simply adding a few diagonal braces.

Specifications

- EN 1004 TÜV approved
- 200 kg/m² workload according to scaffolding class 3
- Up to 14m working height inside
- Up to 10m working height outside
- Available in length: 1.8m and 2.5m
- Available in width: 0.7m and 1.3m
- Tube wall thickness: 2.3mm (frame vertical) and 2.15mm (rungs + braces)
- Colour coding on all braces
- Made in The Netherlands
