

Aluminium Scaffolding

Service & Maintenance

Ground Support Equipment

Easy and safe on the flat roof with lightweight aluminium roof edge protection!

Roof protection 2000 consists of only a few special parts: 3m long tubes with spigot pin, securing clips and the barrier frames with rotation roof joist and steel cantilever weights.

The knee and hip guardrails are simply secured on the right height in the barrier frames that have to be positioned at maximum 3m distance from each other.

It is possible to rotate the roof joist if imposed by the working circumstances.

Specifications

- Meets NEN-EN13374
- Meets AI 15: Safe working on roofs and the Dutch occupational health and Safety Act
- To be used when fall height is 2,5m or more
- Lightweight aluminium with steel cantilever weights
