## Working safely in your staircase!

Stability due to special wall support

The Custers staircase scaffold offers a unique solution to work upon an existing stairs. On top, an extension of 2m can easily be realized in order to gain 2m of extra working height.

A long hatch in the platform provides a free passage on the stairs when the staircase scaffold is in place.

Stability is obtained using a special wall support fixed into the staircase opening.

If this support can not be mounted, a simple outrigger can provide sufficient stability. With the 2m top-extension system this standard outrigger is always recommended.

### Specifications

- 0.7m x 1.8m platform
- To be extended with 2m maximal
- Appropriate for straight flight and quarter turn staircases
- Made in The Netherlands
